

Mapping SDK - Getting POI info from a Map Marker

This documentation is no longer actively supported and may be out of date. Going forward, please visit and bookmark our new site (<https://docs.phunware.com/>) for up-to-date documentation.

Getting POI info from a Map Marker

The Mapping SDK associates a **PointOptions** object with its associated Google map marker object.

When setting up InfoWindow click listeners, you can access the POI info from the marker by calling the `getTag()` method on the marker and cast it to **PointOptions**.

```
map.getGoogleMap().setOnInfoWindowClickListener
(new GoogleMap.OnInfoWindowClickListener() {
    @Override
    public void onInfoWindowClick(Marker
marker) {
        PointOptions point = (PointOptions)
marker.getTag();
        if (point != null) {
            long floorId = point.getFloorId();
            String name = point.getName();
        }
    }
});
```
