iOS SDK Querying Content - CM	The <code>PWCME</code> SDK provides convenient methods that allow you to very easily search and filter for CME content. The primary classes for querying are <code>PWCMEQuery</code> and <code>PWCMEQueryOperation</code> . You can also leverage the convenience method on <code>PWCMEContainer</code> to perform queries. This document includes: Constructing a Query, Executing a Query, and Paginating Query Responses.	1/14/2015
iOS SDK Building Query Predicates - CM	An <code>NSPredicate</code> object defines the logical conditions for determining whether a record is a match for a query. The <code>PWCMEQuery</code> class supports a subset of the predicate behaviors offered by the full <code>NSPredicate</code> class. This document includes: Predicate Rules for Query Objects, Supported Predicate Operators, and Sample Predicate Format Strings.	1/14/2015
